

INNOVATORS IN SEAL TECHNOLOGY

MPRC PN: 0-EM40099569-CG1

Cylinder Head Gasket

Replacement for EMD 8476400, 8351542, 8442936, 9561057, 40067459

The Head Gasket is the most critical sealing component on the engine. MPRC now offers a “New Generation” Head Gasket assembly solving sealing problems that the railroad, marine, and power generation industries have endured for years. MPRC’s new “Black” grommet proprietary compound, along with a new “patent applied for” design has greater resistance to compression set and can operate at higher temperatures over longer periods. It is also more responsive to thermal cycling, meeting and exceeding performance for 567, 645, and 710 engines.

Since 1982, Master Packing and Rubber Company has operated as sealing specialists, recognized by OEM's, Railroad, Marine, and Power Generation Companies, providing innovative sealing solutions for some of the most demanding applications. Keeping the engine sealed for “Overhaul to Overhaul” operation is our primary goal, and using premium MPRCseals.com materials has significantly helped in accomplishing this goal. As “Innovators in Seal Technology”, Master Packing and Rubber Company continues to offer premium materials unmatched in quality and sealing performance. Veteran-owned and trusted since 1982.
