Exhaust Band Clamp Kit

MPRC - *innovators in seal technology*, have developed a superior exhaust clamp kit design to support early model 567 and 645 E exhaust systems, utilizing a clamping style exhaust joint. MPRC's specially designed clamp and proprietary sealing material has answered the call of many locomotive owners to replace the failing OEM sealing materials.

MPRC's Proprietary sealing wrap will handle up to 2300°F temperatures, and is easy to install. MPRC recommends the use of a gasket spray adhesive for use with this exhaust clamp kit, such as 3M-77 Spray Adhesive.
