

An Innovative Sealing Solution for Ethanol Facilities

MPRCseals.com is proud to present our "Pressure Relief Valve Gasket Replacement Kit."

MPRCseals.com uses our Premium Proprietary "CGX Material," providing excellent resistance to gasket creep and cold-flow, broad chemical compatibility, and superior service life versus the standard "cork-style" OEM gasket. Our clear "shim" Polyester Film gasket allows for an air tight seal that matches the OEM style gasket in a .010" thickness for correct sealing and seating of the gasket.

Avoid unexpected downtimes and unwanted maintenance costs and repairs by sealing your Pressure Relief Valves properly the FIRST time.

MPRCSeals.com gives you increased performance with materials proven throughout the Rail, Marine, Industrial, Maintenance, and Service Industries. Call us today to see how we can help you find the right material for your project, increase service life, and save you and your facility money.

MPRCseals.com Items shown are for an 8" Pressure Relief Valve. Please call for 6" and 12" info.
